

WHO WE ARE

Our mission is to develop and implement a method of producing energy from ocean currents that can beat the cost of fossil fuel driven systems.

Statement of founder: Herbert L. Williams: “I believe in myself, my people and this project. I believe we have a moral obligation to leave fresh air to breath for the generations who will follow”.

Florida Hydro employees and management team are carefully selected. We value people of high principle and insist on honesty, integrity, fairness and a professional business conduct. We require even a more demanding code of conduct from our executives. We adhere to a high standard of transparency in our finances. We appreciate our investors and recognize that without them, we would not exist. We keep an honest and accurate set of books and they are open any working day to any investor.

We support and encourage solar, wind, bio-mass, geothermal, ocean thermal, ocean current, hydro, wave, tidal, hydrogen, methanol, ethanol, methane and all the other groups who are helping to reduce the amount of environmental pollutants daily being dumped on our planet.
